EXPERIENCE

Learning Space Technician, Colorado School of Mines IT – Golden, CO *March 2026 – Current*

- Proactively address AV issues to streamline device setup and classroom readiness in 95 classrooms per week.
- Create and revise detailed documentation of troubleshooting processes to support employee training and longevity.

Implementation Consultant Intern, FAST Enterprises – Lincoln, NE *May 2026 – August 2026*

- Collaborated directly with stakeholders at the Nebraska DMV to gather requirements and define technical specifications for online resource updates.
- Implemented processes for 30+ driving schools including registration, renewals, audits, and other common processes using C# and PostgreSQL; demonstrated functionality to end user and supported training.
- Designed, executed, and documented comprehensive test scenarios to ensure high quality and reliability.

Data & Software Engineering Intern, Vitesse Energy, Inc. – Centennial, CO *May 2025 – August 2025*

- Utilized Sigma and SQL to manipulate and organize data from Snowflake databases into interactive dashboards to aid in making informed decisions on natural gas well acquisitions.
- Automated time-consuming data correction with Python scripts to ensure clean data entry into database fields.
- Independently developed a website with a sleek user interface to streamline the addition of well updates to a DB.

Robotics Intern, Vitesse Energy Inc. – Centennial, CO *May 2022 – August 2022*

- Independently programmed and built a temperature collection robot, interfacing Raspberry Pi and Arduino.
- Applied Scrum framework to manage development cycles, using Microsoft Teams and participated in sprint planning and retrospectives with the IT team.

PROJECTS

Oil Well Data Collection Website *May 2025 – August 2025*

- Programmed a website with functionality including secure login, data input, and access to current and historical reports. Added functionality to integrate new data into the company's Snowflake DB.
- Communicated with the client during stages of development to ensure compliance with existing procedures.
- Tools: Django, Azure, Snowflake, Python, HTML, CSS

Temperature Housing Environment - Office Output Navigator *May 2022 – August 2022*

- Programmed and constructed an autonomous driving device that collected and uploaded temperature data to adjust thermostats around an office.
- See github.com/gwensab/Temperature-Collection-Robot for documented implementation.
- Tools: Python, C++, Raspberry Pi, Arduino, Distance sensors, Temperature & humidity sensors, Github

EDUCATION

Colorado School of Mines, Computer Science BS - Robotics & Intelligent Systems *August 2023 – December 2026*

Colorado School of Mines, Robotics MS *August 2026 – December 2027*

- **GPA:** 3.35
- **Involvement:** Society of Women Engineers, Mars Rover Team
- **Study Abroad:** Maynooth University, Maynooth, Ireland *June 2024 – July 2024*

TECHNICAL SKILLS

Programming Languages: Python, C, C++, C#, Java, JavaScript, HTML, CSS, SQL, LaTeX, RISC-V, Lisp, OCaml

Programs: Github, Sigma, PostgreSQL, VS Code, Eclipse, SolidWorks, Windows Suite, Google Suite

Relevant Coursework: Computer Vision, Machine Learning, Coding with AI, Robotics, Data Structures & Algorithms, Circuits, Software Engineering, Feedback Control Systems, Robot Planning & Manipulation, Artificial Intelligence, Programming Languages, Operating Systems
